

MEMORANDUM

TO: Programs, Projects and Operations Subcommittee

FROM: Ian Ghanavati, Water Resources Engineer

SUBJECT: Renewal of USGS Maintenance Agreement for Papio Floodwarning System Gages

DATE: October 11, 2022

In 1993, the District worked with the US Army Corps of Engineers (USACE) to install a flood warning system for the Papillion Creek Watershed. The system was upgraded in 2012 and consists of 22 gage stations. 4 stations report rain data, 8 report rain and stream stage data and the remaining 10 stations report rain, stream stage, and discharge data. The attached map shows the location of the gages. The data is reported real time and is available to the public through the National Weather Service (NWS) and USGS web sites. The address of the NWS website is <http://water.weather.gov/ahps2/index.php?wfo=oax>. An agreement is in place with Douglas County, Sarpy County, Washington County and the City of Omaha to share the cost of the system.

The joint funding agreement for consideration is an annual renewal of the maintenance contract with the USGS for 2023 in the total amount of \$168,320. The USGS will cost share \$16,875 through their Cooperative Matching Funds and \$19,805 through the Federal Priority Streamgages Program. The District cost share totals \$131,640 for operation and maintenance of the gages. In comparison, in 2022, the District contribution was \$127,595 for gage operation and maintenance. Table 1 of the agreement is attached and provides a cost breakdown as well as the gage type and data collected for each site.

The quality data provided by USGS is valuable to NWS to improve forecasting and issuance of flood warnings in the Papio watershed and to the District for operation and monitoring of the Papio flood control systems. Each year the USGS works to record high flows and provide the District and its partners improved data for rating curves (flow vs. stage) at each site. The NWS, USGS and the District continue to discuss upgrades to the system to better serve the agencies using the data as well as working to make the information more readily available to the public.

Management recommends that the Subcommittee recommend to the Board that the General Manager be authorized to execute the proposed Joint Funding Agreement with the USGS in the amount of \$131,640 in District funds for the operation of the District's floodwarning system for 2023, subject to changes deemed necessary by the General Manager.
